

## Question 2

Correct

Mark 1.00 out of 1.00

Flag question

Write python code to find the Least Common Multiple among given two numbers.

Answer: (penalty regime: 0 %)

```
1 def cal_lcm(x, y):
2     if x > y:
3         greater = x
4     else:
5         greater = y
6     while(True):
7         if((greater % x == 0) and (greater % y == 0)):
8             lcm = greater
9             break
10        greater += 1
11    return lcm
12
13 num1 = int(input())
14 num2 = int(input())
15 print("The L.C.M. is {}".format(cal_lcm(num1, num2)))
```

	Input	Expected	Got	
✓	54 24 The L.C.M. is 216	54 24 The L.C.M. is 216	54 24 The L.C.M. is 216	✓

	Input	Expected	Got	
✓	54 24 The L.C.M. is 216	54 24 The L.C.M. is 216	54 24 The L.C.M. is 216	✓
✓	568 928 The L.C.M. is 65888	568 928 The L.C.M. is 65888	568 928 The L.C.M. is 65888	✓
✓	8 7 The L.C.M. is 56	8 7 The L.C.M. is 56	8 7 The L.C.M. is 56	✓

Passed all tests! ✓

### Question author's solution (Python3):

```
1 def compute_lcm(x, y):
2     if x > y:
3         greater = x
4     else:
5         greater = y
6     while(True):
7         if((greater % x == 0) and (greater % y == 0)):
8             lcm = greater
9             break
10        greater += 1
11    return lcm
12 num1 = int(input())
13 num2 = int(input())
14 print("The L.C.M. is", compute_lcm(num1, num2))
```

24	24	24	
The L.C.M. is 216	The L.C.M. is 216	The L.C.M. is 216	
✓	568	568	✓
928	928	928	
The L.C.M. is 65888	The L.C.M. is 65888	The L.C.M. is 65888	
✓	8	8	✓
7	7	7	
The L.C.M. is 56	The L.C.M. is 56	The L.C.M. is 56	

Passed all tests! ✓

### Question author's solution (Python3):

```
1 def compute_lcm(x, y):
2     if x > y:
3         greater = x
4     else:
5         greater = y
6     while(True):
7         if((greater % x == 0) and (greater % y == 0)):
8             lcm = greater
9             break
10        greater += 1
11    return lcm
12 num1 = int(input())
13 num2 = int(input())
14 print("The L.C.M. is", compute_lcm(num1, num2))
```

Correct
